**CANAL MARINE AND INDUSTRIAL INC. ANNOUNCES ISO9001:2015 CERTIFICATION
FOR QUALITY MANAGEMENT SYSTEM**

ST.CATHARINES, ONTARIO, November 2019—Canal Marine and Industrial Inc., a leader in providing electrical design and engineering services to government, industrial, commercial and marine clients in Canada, announced today that it has achieved certification in the most current ISO 9001 standard, ISO 9001:2015 for its Quality Management System.

Canal's Quality Management System has been assessed by NSF-ISR and found to be in conformance with its ISO 9001:2015 standard. The scope of registration includes the design and provision of electrical, communication & navigation, power distribution, and instrumentation installation, maintenance, and retrofit services and parts to the marine and commercial industries.

"Earning ISO 9001:2015 certification was a rigorous and thorough process, requiring everyone's engagement during an incredibly busy period of activity and growth. It was akin to performing a thousand point inspection of a vehicle we were driving at 100km/h while, at the same time, adding more passengers and seats! That aside, this process has validated many of the quality measures and procedures which Canal has organically developed through our commitment to customer satisfaction." said Shawn Balding, Commercial Director. "Adopting ISO 9001:2015 within our Quality Management System further ensures satisfaction for our customers, and establishes a structure for continuous monitoring and improvement."

ISO 9001:2015 is a globally recognized quality management standard developed and published by the International Organization for Standardization (ISO) that provides a model companies of all types and sizes can use to build an effective quality management system. The standard is based on several quality management principles, including a strong customer focus, involvement of high-level company management, a process approach and ongoing improvement of the process.

For almost a half a century Canal has provided electrical design, engineering, and service around the clock to the merchant marine, naval and coastguard fleets in Canada. From the heaviest Ice Breaker, the largest Bulker, Warships, Tugs and Research Vessels, Fish Boats, Cruise Vessels and Ferries and from the oldest to the newest, we have been there to restore, maintain, and improve their operational reliability and safety.
